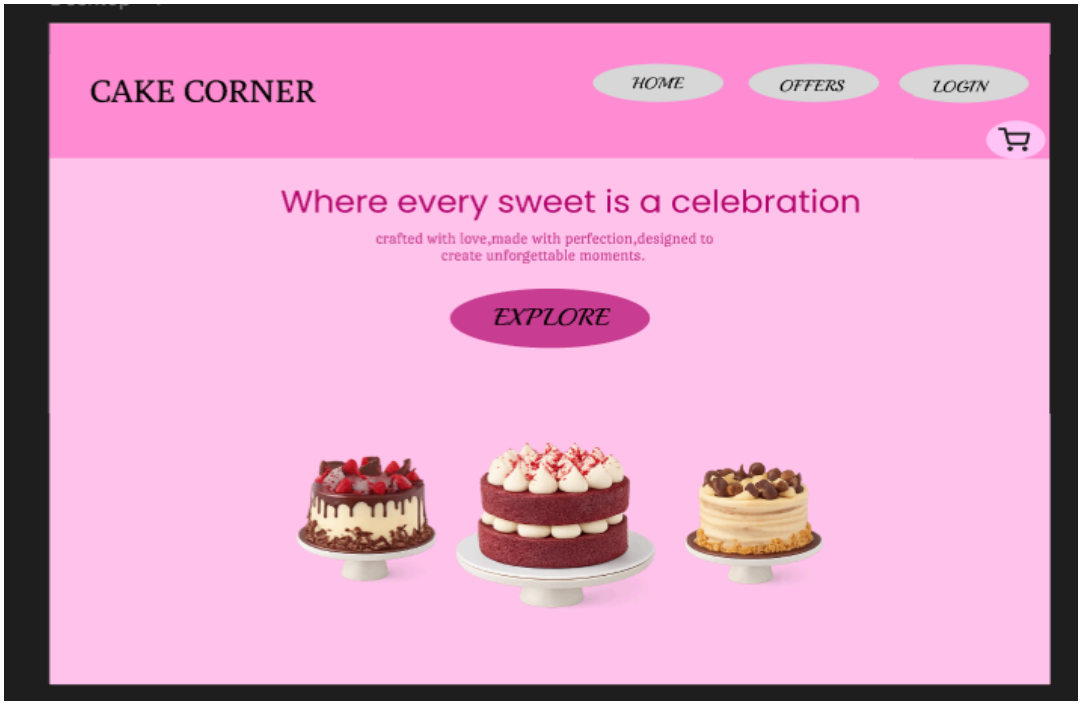
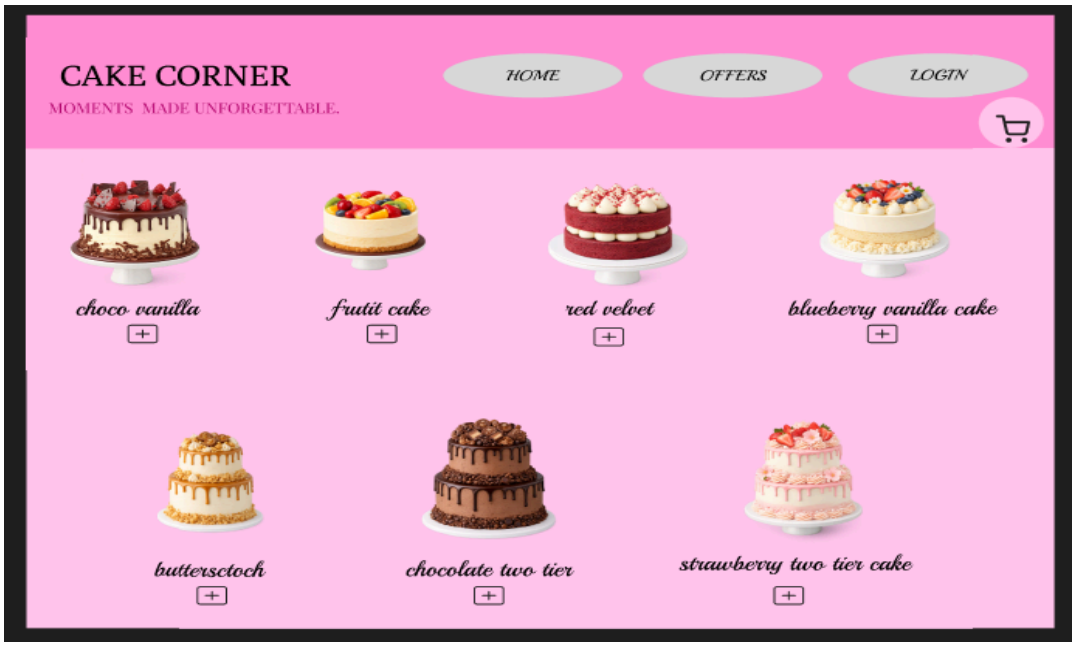
GOOD DESIGN AND BAD DESIGN

GOOD DESIGN:





WHY GOOD DESIGN ?

1. The design uses consistent and soft colors, which make the interface visually pleasant.

2. Proper alignment of text, images, and buttons creates a clean and organized layout.

3. Clear visual hierarchy helps users easily understand important content like headings and buttons.

4. Adequate spacing between elements avoids clutter and improves readability.

5. Consistent font style gives the design a professional appearance.

6. Navigation menu is clearly visible, making it easy for users to move through the website.

7. Cake images and names are displayed clearly, helping users identify products easily.

8. Overall layout is simple and user-friendly, providing a good user experience.

BAD DESIGN:

WHY BAD DESIGN ?

1. The design uses too many bright and mismatched colors, which makes it uncomfortable to view.

2. Text and background colors do not contrast well, reducing readability.

3. Elements are not properly aligned, making the layout look messy.

4. Spacing between images and text is uneven, creating a cluttered appearance.

5. Fonts and text styles are inconsistent, which looks unprofessional.

6. Important buttons are not clearly highlighted, confusing the user.

7. Navigation placement is unclear, making it hard to move through the website.

8. Overall layout is confusing and does not provide a good user experience.
