EXPERIMENT – UI/UX PROTOTYPE

AIM

The aim of this experiment is to design and develop a mobile application prototype using Proto.io that incorporates both familiar and novel navigation elements. The objective is to evaluate usability, user engagement, and interface effectiveness through a structured UI/UX design approach.

INTRODUCTION

User Interface (UI) and User Experience (UX) design play a crucial role in developing interactive and user-friendly applications. A well-designed interface enhances usability, improves accessibility, and increases user engagement.

In this experiment, a mobile application prototype named **SkillBoost** was developed. The application focuses on skill tracking and performance monitoring for students. The prototype includes a Login Page and a Home Dashboard that visually represents skill levels and growth trends.

The design integrates both familiar navigation patterns and innovative visual elements to improve usability while maintaining engagement.

OBJECTIVE

- To create a mobile UI prototype using Proto.io
- To integrate familiar and unfamiliar navigation elements
- To design an engaging skill tracking dashboard
- To visually represent skill growth using trend analysis
- To evaluate usability across different user groups

TOOL USED

Proto.io – A cloud-based prototyping tool used for designing interactive mobile application interfaces.

DESCRIPTION OF THE PROTOTYPE

The SkillBoost prototype consists of two primary screens.

Login Screen

The Login Screen provides authentication access to users.

Features:
- Application title and branding
- Email input field
- Password input field
- Login button
- Clean blue background theme

Familiar Navigation Elements:
- Username/Email field
- Password field
- Login button

These elements follow standard authentication design patterns commonly used in mobile applications.

Home Dashboard Screen

The Home Dashboard displays skill-related analytics and performance metrics.

Features:
- Greeting message (“Hi, Shruti”)
- Search bar
- Vertical skill level indicators (Coding – 89%, Communication – 75%, Problem Solving – 68%)
- Highlighted selected skill
- Skill Growth Trend graph
- Upward trend arrow indicating improvement

The dashboard visually represents user performance through progress indicators and graphical trends.

FAMILIAR NAVIGATION ELEMENTS

The following familiar navigation components were implemented:

- Search bar
- Highlighted selected skill card
- Percentage-based progress indicators
- Linear growth trend graph
- Profile icon

These elements are intuitive and reduce the learning curve for users.

UNFAMILIAR / INNOVATIVE ELEMENTS

The prototype includes modern UI elements that enhance engagement:

- Vertical pill-style skill indicators
- Graphical skill growth trend visualization
- Highlighted skill card with percentage emphasis
- Visual upward arrow indicating progress

These design choices increase user interaction and motivation.

RESULT

The SkillBoost prototype successfully integrates familiar navigation elements with innovative UI features. The dashboard effectively communicates skill levels and growth trends using graphical representation.

The application demonstrates how visual analytics and modern UI components can enhance user experience in educational and skill-tracking applications.
